IN THE SPECIFICATION:

Please delete the paragraph beginning on page 62, line 23 and replace with the following:

Contents to be embedded in a page template or layouts can be dynamically changed without editing an HTML file or correcting a server program such as CGI. A page template is defined with a servlet that specifies a display area and a display attribute for controlling displays as parameters. When the Servlet is recognized at the web server side, a plurality of part beans that are stored by being related to display-area specifying information are specified. The information for linking image data for forming an object to be embedded in the display area and link-destination-URL information ~~is~~ are set to the part beans as properties. Moreover, display-condition information such as schedule information or the like is related to the part beans. A display condition is checked by each of the part beans stored by being related to the display-area specifying information to obtain the image data for forming an object to be embedded in a display area, link-destination-URL information or the like in accordance with the link information serving as properties of the part beans meeting the display condition and ~~generate~~ generating the HTML.
